NUMBER 3

五 十 三

EDITED BY: ROD GOWEN  
 CHAIRMAN: DICK WAGNER  
 V/CHAIR/SEC: VINCE LYON  
 TREASURER: ROD GOWEN  
 PR OFFICER: BOB EVANS  
 LIBRARIAN: LAURA GOWEN  
 ED ASSISTANT: LAURA GOWEN

Our December meeting was held on December 5, 1984, at 7:35 P.M.. We met in the Community Room of Far West Federal Savings and Loan, in the Oregon City Shopping Center. After the announcements and news, there was some new business. It was proposed and passed that we purchase an Eprom Programmer for the groups' use. The Eprommer has been ordered.

The Okimate 10 Color Graphic Printer is available for some computers, but not for the T/S line. It was proposed that we start a write-in campaign to try to get them to possibly make an I/F available for us.

Write or call:

OKIDATA  
PAUL PIERGROSS  
532 FELLOWSHIP ROAD  
MT. LAUREL, NJ 08054  
1-609-235-2600 EXT. 244

Let's see if we can get equality  
for T/S USERS.

Our first meeting for the new year will take place:

on: JANUARY 3, 1985  
at: 7:30 P. M.  
in: COMMUNITY ROOM  
FAR WEST FED SAVINGS  
DC SHOPPING CENTER

There will be some interesting things to see at the meeting. The A&J 2000 Microdrive will be demonstrated in a dual drive set up. There will be a demo of the Epson RT 80 FT printer interfaced to the 2068, and much more. Why not come out and see what's new in T/S LAND.

SEE YOU ALL THERE

## BITS and BYTES

Well, here we are again. The start of another year. We can only hope that we have as much good news to report in this column in the year to come as we have had in 1984.

**MICRODRIVES-** As you know by now, the A&J Microdrive 2000 is available for the 2068. Watch for future reviews on the use and operation of this unit.

UK MICRODRIVE- We have news from the Long Island Sinclair Timex (L.I.S.T.) that one of their members has successfully interfaced the Spectrum Microdrive to his 2968 with the Spectrum ROM. One more way to go.

TIME DESIGNS- Have you seen the newest T/S magazine on the market? If not, you should take a look. We are fortunate that one of our own members, TIM WOODS, is the Editor-Publisher of the new endeavor. We want to wish you good luck again, Tim.

NEW OFFICERS- Let's all join together to welcome our new officers into office and to wish them well in 1985.

HAPPY NEW YEAR- Before we forget to do so, let us take a moment and a few lines to wish all of our members and readers in T/S Land a very HAPPY NEW YEAR!!

DISC I/F- The disc drive interfaces that were to become available in December have so far failed to show. At least we have no news as to when (if?) they might be released. Seems as though the microdrive is the best for now.

EPROMMER- We have ordered the Eprommer, a device for programming our own eproms to make cartridges for ourselves, from a company called Research Service Labs in Oklahoma City. It has been about 8 weeks and no sign yet. The company has no listed phone, but advertises in Computer and Electronics magazine. We sure hope that it shows up soon or we may have to take action.

$\frac{1}{2}$     $\frac{3}{4}$     $\frac{5}{8}$     $\frac{7}{8}$     $\frac{9}{16}$     $\frac{11}{16}$     $\frac{13}{16}$     $\frac{15}{16}$     $\frac{17}{32}$     $\frac{19}{32}$     $\frac{21}{32}$     $\frac{23}{32}$     $\frac{25}{32}$     $\frac{27}{32}$     $\frac{29}{32}$     $\frac{31}{32}$

MICRODRIVE SOFTWARE- We find that with the Microdrive 2000 having just been released, there are at least 4 companies already offering their software on wafer format. We understand that A&J will be making a list for all dealers listing all the dealers of the hardware AND software to run on it.

LIBRARY- Our thanks to all of you who have donated books and programs to the Library in the past year. The Library has almost doubled in that time. If you haven't taken advantage of our Library yet, you should look into it. It is there for the benefit of all the members. (NOTE: We still have not found the two missing copies of ZX Computing. We would appreciate any and all help in tracking them down.)

CONVERSIONS- We want to thank DENNIS JURRIES for the work he did and is doing in converting ZX Spectrum programs listed in ZX Computing to run on the 2068. These programs are in the tape library for your use. THANKS AGAIN. DENNIS!

THIS IS YOUR NEWS COLUMN- It is here to pass on any and all news that is relevant to T/S Users. If you have any tidbits of news that you think would benefit others, PLEASE get it to us and we will print it.

See you next time.....

Figure 1 illustrates a multi-step chemical synthesis process. The process begins with a starting material (a complex organic molecule) and proceeds through 15 numbered steps. Each step involves a reaction with specific reagents and conditions, as indicated by the arrows and text in the diagrams. The reagents and conditions for each step are: 1. H<sub>2</sub>, Pd/C; 2. H<sub>2</sub>, Pd/C; 3. H<sub>2</sub>, Pd/C; 4. H<sub>2</sub>, Pd/C; 5. H<sub>2</sub>, Pd/C; 6. H<sub>2</sub>, Pd/C; 7. H<sub>2</sub>, Pd/C; 8. H<sub>2</sub>, Pd/C; 9. H<sub>2</sub>, Pd/C; 10. H<sub>2</sub>, Pd/C; 11. H<sub>2</sub>, Pd/C; 12. H<sub>2</sub>, Pd/C; 13. H<sub>2</sub>, Pd/C; 14. H<sub>2</sub>, Pd/C; 15. H<sub>2</sub>, Pd/C. The final product is a complex organic molecule, likely a polymer or a large organic compound, with various functional groups and side chains.

FROM THE  
EDITOR'S DESK

WELL, the elections are history. We have our new officers, elected by the membership at large. With such a large membership, I had hoped to see more votes cast for OUR OFFICERS. With 53 ballots sent out, we only received 16 votes. As I always tell the people who ask about our membership, we represent a good cross-section of our local society. And, as in our local society, there seems to be a large amount of public apathy around. Oh well, I'll get off the soapbox. One last word on the subject, IF YOU DID NOT OR WOULD NOT TAKE THE 2 MINUTES REQUIRED TO VOTE, THEN DO NOT COMPLAIN ABOUT YOUR LEADERSHIP!

On the bright side, we hope that each of you has a better and happier New Year.

#####

# ZX/TS P and R

This month we have a couple of things for the 2068 as well as a program for the 1000. The 1000 program, MOTORCYCLE JUMP, comes to us from the database on the COMPUTER AND ELECTRONICS MAGAZINE SPECIAL INTEREST GROUP (SIG) on COMPUSERVE. It was downloaded and LISTED for you. It is also in the tape library on a tape called GAMES FROM COMPUSERVE.

The 2068 routine and program are both from JACK ARMSTRONG.

We are also including a program that appears in SYNTAX. It will print cassette labels on your 2040 printer. It is easily adapted to the 2068. We think that it makes a very nice looking label.

Credit is given in each listing to whom deserves it.

ENJOY.....

```

## BOOK REVIEW

### BOOK REPORT

by Jack Armstrong

THE ESSENTIAL GUIDE TO  
TIMEX/SINCLAIR  
HOME COMPUTERS

by Peter Morse, Ian Adamson,  
Ben Anrep and Brian Hancock  
ISBN 0-671-47069-8 Pbk

This is the best book on programming yet encountered by this writer. Usually I am bewildered by explanations that assume that the user knows the same things that the writer does and the upshot is that I only understand about 60% of what is written. This book is so well written that my comprehension is up to about 85%. That in itself is a great accomplishment. The rest of the nice things about this book are gravy.

It covers a lot of ground from the very basic to the advanced. It was written for the ZX 81 and the 1000 with notations for the Spectrum/TS 2000 (sic).

I haven't covered the entire book in detail yet—it will take a long time and a lot of study to go through all of it.

The authors have tried to go through all of the commands with explanations and, usually, examples of how things work.

They have provided programs in the text that use the principles discussed and there is a program library at the end of the book with more programs.

None of the commands that are unique to the 2068 are covered in the text but this is a small complaint. The clarity and completeness of the text are a joy for someone like me who needs a guru at his shoulder at all times.

The best example of the authors' expertise is in their treatment of the Boolean operators—I almost understand them and have used a few in my own programs.

There is a section devoted to the Spectrum/2000 (sic) that covers all of the additional material that one needs for that machine, except the commands that are unique to the 2068.

If you need a reference book and an excellent tutorial, then this is the book for you to add to your library.

## UPCOMING

Watch for next month's PLOTTER.  
In it you will find your updated  
CCAT/S membership list. It will  
contain the names of all paid  
members as of January 15, 1985.  
If you want your name on the  
roster, make sure your dues are  
paid on time.  
There will also be some reviews  
on the new A&J Drives.  
These and more, next month...

WATCH FOR IT!

ENJOY IT!!!
